## Jay says

It was pretty fun to read. I can understand more of the math with some humors!

## Thames says

This is about functions and figuring out numbers you don't know.

I liked this book because I like maths and that there are problems that you can do in this book.

I don't know who thought of how to put in letters instead of numbers.

---

## Mao Mao says

The Phantom X has a special character: X. I played lots of math games as I read this book and even convinced mom to play with me. Unfortunately, she didn't agree. The game I convinced her to play was a calculation system with X. Finally I showed her the bottom of page 65 and she didn't even seem surprised.

## Kelwalin Dhanasarnsombut says

Feeling like a teenager again reading this book. Mathematics is a good useful subject I had never be able to put my fingers on why I'm never good at it. May be this is the way I should have been introduced to variations, unknowns, and equations.
