## Evil Inventions Nick Arnold

"Horrible Science" is getting a make-over! Readers will discover why someone invented the bottom-stabbing bike saddle and why you would need a toilet snorkel. With a fantastic new cover look and extra horrible bits at the back of the book, this best-selling title is sure to be a huge hit with a new generation of "Horrible Science" readers.

### **Almas says**

I don't read yet

---

### **Beth says**

3.5\*

I quite liked it as a child as I was already interested in science. Not as well-written as Horrible Histories.

---

### **RCPP says**

This book is evilly full of inventions. From the dumb earth blaster ray, or a stupendously funny so you can have your chickens see farther with chicken spectacles invention. Or the porta-pet pooch potty so you can have your dog pee in your house, in a little rubber bowl. My favorite invention was, well, the one from the last period (dog one).

I would recommend this book to inventors...anybody.

---

### **Hanna M.K. says**

Horrible Science books are always fun and full of humour! However, you learn a lot about Evil Inventions in this world! You will not regret reading this book!

---

### **Jennifer (JC-S) says**

I really enjoyed this little book. It is primarily aimed at 7 to 12 year olds and, I am sure, would appeal immensely to many of them. And not just to children. There is a wonderful blend of the serendipity of

scientific discovery, the shock value of some inventions, and some intriguing facts.

Consider, for example, the following narrative about the use of gears: 'What they do: Gears come in many sizes but they all pass on movement energy using their teeth. Where else found: Inventions such as car gears, clocks, corkscrews and tin openers – anywhere where a force needs to move a wheel. Oddly enough, modern tin openers weren't invented until 1920 – that's over one hundred years after tinned food. Before then people had to open tins with a hammer, and US Civil War soldiers shot them open with guns.'

My son, at the relevant age, would have loved this book. The cartoon drawings that accompany the text are both fun and informative.

### **Khoa says**

This book doesn't only show the inventions that succeeded but also shows the ones that failed. It shows who some people died trying to make the inventions. It's a gory story, but pretty interesting

---

### **Fir Tree says**

Evil Inventions

A truly shocking book explaining all the inventions of the past.

In my opinion the best bits are when they show you the stupid (but sometimes gory) inventions of the past! My least favourite parts are when they focus on a particular machine (and make really, really, really bad jokes!)

The main characters are:

Professor Z: an unreal inventor

Nasty Nora: an unreal inventor

Narrator: a very funny narrator (hence the name)

I would recommend this book to people who like history, inventions and humour (a lot of humour come to it!)
