From Reader Review The Amazing Qur'an for online ebook

Haider Alwasiti says

One of the best books in using reasoning to find the truth in religions

One of the best books that I read about religions. The author is trying to reach conclusions to teach the truth through logical reasoning and he was quite successful to show that. Perhaps because he is a mathematician, and that helped him to use the robust methods of logical reasoning and proofs to find out the real answers for the big questions of life.

Ayah Gamil says

He is someone who read Quran with his mind and soul.. He was looking for the truth and he found it. May Allah bless him and keep him in the right path.

Derek Karnes says

The Amazing Qur'an is just another nail in the coffin. A few of the things in it are interesting, but it boils down to three 'challenges':

- 1) the Qur'an is flawless (Google to find, literally, 1000 flaws in the Qur'an)
 - 2) the Qur'an is divine - if you don't think it is, prove it (burden of proof fallacy)
 - 3) Muhammad is criticized as being crazy, or a liar, and according to this pamphlet, he can't be both. Because, it says, the Qur'an is always right (see point 1). (I'm not sure why he can't be crazy, a liar, and sometimes right, but... by this point I don't even care)
-

AG. says

“Another interesting attitude that exists in the Quran repeatedly deals with its advice to the reader. The Quran informs the reader about different facts and then gives the advice: "If you want to know more about this or that or if you doubt what is said, then you should ask those who have knowledge." This too is a surprising attitude. It is not usual to have a book that comes from someone without training in geography, botany, biology, etc., who discusses these subjects and then advises the reader to ask men of knowledge if he doubts anything. Yet in every age there have been Muslims who have followed the advice of the Quran and made surprising discoveries. If one looks to the works of Muslim scientists of many centuries ago, one will find them full of quotations from the Quran. ”

Seyed Mohammad says

As a mathematician and logician he has looked at The Quran from a very rational perspective.
His analyzes various statements made in the Quran form a logical point of view and proves to the reader that
the Book could only be of Devine origin.
Maybe the best book I red about the Quran. Really enjoined it and recommend it to my friends.
